**WIMU Instrumentation of Assassin Trainer & Skeleton Sled – Initial Data Capture**

Mark Gaffney¹, Steffi Coyler², Dr. Michael Walsh¹, Scott Drawer³, Dr. Aki Salo², Brendan O’Flynn¹, Dr. Cian O’Mathuna¹

---

**Motivation**

**Skeleton**

Winter Olympic Sled Sport
1km+ Downhill Ice Course
High Speeds (140km/h)
Large Accelerations (5g)
Fractions of Second Crucial!

**Start period**

20-30m Pushing & Loading
Complex Explosive Movements
Believed Critical to Performance
Not Well Understood or Studied
Room for Improvement?

**Collaborative Project**

University of Bath & UK Sport
Tyndall’s Sensor Expertise
Instrument Athletes & Equipment
Investigate Start Period & Training
Improve Athlete Performance?

---

**Implementation**

**What’s a WIMU?**

Wireless
Inertial
Measurement
Unit

**Assassin Start Trainer**

Training System for Sled Starts
Rolling Sled on Adjustable Incline
Mounts for Resistance Bands & Weights
Attach WIMUs to Sled Metal Spurs
Basic Timing Data - 2 Portable Light-Gates
Multiple Runs - Different Weights & Inclines

**Skeleton Test Track**

Practice Track for Sled Start
Concrete with Wheeled Sled on Metal Rails
Attach WIMUs to Plates on Sled Corners
Base-station Near Loading Point
Detailed Timing Data - 13 Embedded Light-Gates
Multiple Runs - Different Step Count & Push Style

**WIMU on Assassin**

Instrumented Assassin Run

---

**Outcome**

WIMU Data was successfully recorded for 35 Assassin and 11 Skeleton runs with average sensor sampling rates in the 100’s of Hz per WIMU. Such WIMU based systems show great potential for skeleton performance analysis and possibly becoming part of elite athlete’s strength and fitness training. Future work will involve getting more data, instrumenting the athlete and focusing on the stages of the skeleton run beyond the initial pushing and loading period.
