1 The original protein sequence of NZ9000-Cro<sub>712</sub>-gpT<sub>TP901-1</sub>::Ter mutant shows only the amino acid sequence of gpG. Protein sequence of gpGT (produced through a -1 frame-shift in *gpG* DNA sequence GGGAAAG, fusing it to *gpT*) is not shown.

2 The original protein sequence of NZ9000-Cro<sub>712</sub>-gpGfs<sub>TP901-1</sub> mutant shows only the amino acid sequence of gpG.

3 Introduced DNA bases causing mutations are underlined once, while introduced bases resulting in a novel restriction site are double underlined.

N/A Not applicable

\* Translation terminating stop codon
