Meet your new President 2009/10
Professor Francis Hughes

Emeritus Member

BSP Serves up Masterclass

A Celebration of Sir Wilfred Fish

A great start to the Diamond Jubilee Year

Presidental Handover
At the Autumn Meeting 2009, Professor Gareth Griffiths handed over the reigns of the Presidency to Professor Francis Hughes.

is once again proud to sponsor The BSP
Presidential Address 2009 “WOW!!”

Firstly I would like to thank all of you in the Society for the enormous honour you do me by asking me to serve as your president, particularly in this special Diamond Jubilee year.

My first challenge as your incoming president is to deliver a suitable address, something which has occupied my mind for some time. My very distinguished predecessors have ably tackled this task in many different ways such as adopting a range of autobiographical, clinical, scientific and political themes, typically in an erudite and witty way. By way of change I decided that I would make my own address into an advertisement, or perhaps more correctly an “infomercial,” to highlight some of the thinking behind the meetings I have planned for my presidential year, and along a rather tortuous way flag some other issues which excite or concern me.

I was initially inspired to follow a career in Periodontology by Frank Ashley at Guys, who by a delightful coincidence was BSP President 10 years ago when the society celebrated its Golden Jubilee. There are many others who have inspired me since including Fred Smalley and Newell Johnson at The London. Today I continue to find periodontology an exciting discipline, which in scientific, research and clinical arenas is still able to make me feel “wow!”

I am confident that you all also have your own “wow factors” in periodontology. Thus we come to the WOW test to try yourself by starting with a non-periodontal example to warm up - this year England won the Ashes at cricket and qualified for the World Cup in football with 2 games to spare.

Periodontal disease is an extremely interesting disease in terms of the pathogenic mechanisms and disease outcomes. Figure 1 shows where much of the action takes place in this disease. This histological side of a periodontal pocket definitely has a wow factor for me!

My own research in the cell and molecular mechanisms of tissue formation excite me in many ways, from the sheer capabilities of modern research methods where it is possible to examine the expression of all the genes in a cell or tissue pretty much in an afternoon’s experiment, to the basic insights these experiments can provide. There is a basic clinical fact in periodontology which we all should remember well and that is just how effective periodontal treatment is essentially tooth survival rates following well conducted periodontal treatment, even in severe cases, are probably better than implant survival rates (figure 2).

Turning to the Society’s meetings this year, in Brighton we will assemble to discuss “20 years of Periodontal Regeneration – where are we now?” Since the introduction of Guided Tissue Regeneration about 20 years ago a number of innovations and techniques have come along. Certainly the explosion in the understanding of the biology of the regenerative processes involved contains much that is “wow” about it. However our clinical results and outcomes remain often frustratingly modest (and definitely not always “wow!”).

The Autumn Scientific Meeting takes as its theme: “Plaque or Plaque + Does Plaque Really Cause Periodontal Disease?”

For me this is not just a gimmicky title but a serious question - when we are starting to understand just how complex the aetiology of this disease is, it is right that we should continue to say that plaque is the cause of periodontal disease. For example it may be true that smoking does not cause periodontal disease in the absence of bacteria, but conversely it may well be true that bacteria do not cause periodontitis without the presence of some other factors such as smoking. Here I suggest a few random statements that have a touch of wow about them:

- Smoking increases the risk of periodontitis by about 5 fold – what is most striking about this widely accepted statement is not that it might be true, but that 20 years ago we had no idea that this was the case, and thought it was all down to the bacteria:

- From the epidemiology, type II diabetes mellitus may be responsible for about half a million cases of periodontitis in the UK:

- Single gene mutations, without primary microbial alterations, can cause periodontitis both in animal models and in humans:

A specific clone (JP2) of a specific bacterium (Aa) appears to cause periodontitis in a specific human population – perhaps the best evidence of a direct causal effect of bacteria in one type of periodontal disease.

Finally the word “wow” is sometimes used to denote something that is not necessarily exciting, but rather that is surprising or unexpected. A personal non-periodontal example is this:

In 1997 Radiohead released their seminal album “OK Computer,” widely regarded as one of the finest albums of all time. However that year the Mercury Music Prize was won by Rioni Size and Reprazent for their album New Forms, which has not perhaps stood the test of time for that year’s judges.

In periodontology there are many things that might fit this type of “wow” reaction. I have chosen a couple which précis information in the 1998 Adult Dental Health Survey. From this data and BSP Parameters of Care it can be estimated that up to 4 million people in the UK might benefit from some sort of Specialist Dental Care. Against this there are less than 300 periodontists on the Specialist list (approx 1:13 000) and around 900 members of the BSP (approx 1:4000).

What is even more disconcerting is that the prevalence of disease on this scale did not appear to be affected by dental attendance patterns. That is to say, you were just as likely to have periodontitis if you attended a dentist regularly compared with someone who never attended a dentist.

Thus in conclusion it seems that in population terms we may be only scratching the surface of treatment need. The BSP, on its 60th Birthday, is a thriving, vibrant society with many things to be proud of. However as its membership we all still have lots of challenges and responsibilities to promote and develop our discipline further.

As we celebrate the Diamond Jubilee of the BSP it is very pleasing to report that the Society is thriving. Under the excellent stewardship of Professor Gareth Griffiths our membership has continued to grow and is now approaching nearly 1000 members. Externally, the BSP is regarded (deservedly in my view) as one of the best organised, effective and most welcoming specialist societies in UK dentistry. This does not happen by accident. The hard work and commitment of the officers of the Society often goes largely unsung but without their efforts we would not really function. In addition we are delighted to acknowledge the enthusiastic and supportive administration provided by Anne Hallowes and latterly by her successor, Clough. Finally, the society is only as good as its membership and I am delighted to applaud you all for your commitment and support for the Society, both in attendance and membership. I am particularly pleased to see that the number of non-members to our meetings, and I hope that they also find the occasions inclusive, accessible and relevant.

The British Society of Periodontology at 60

Our scientific meetings are important in presenting and discussing new concepts, techniques and broadening our horizons. However, as noted elsewhere, periodontology in the UK also faces a number of interesting challenges to both new and senior periodontists.

We are all familiar with the mantra that periodontal disease is the major cause of tooth loss and that in severe cases there is a direct relationship between treatment need and lack of secondary care support. This is reinforced by the most recent Australian ASPE survey, which has produced much to take forward in promotion of periodontal care and is an important fact that we do not let this opportunity slip without comment.

Members will be aware that we have recently initiated a debate as to whether the Society should change its name to reflect the growth of importance of the practise of implant dentistry within periodontology. I do not wish to state my own personal preferences here but would comment that ultimately the wording of our name is much less important than the clear recognition that I think is evident that implant dentistry, particularly surgical aspects, is today very much a part of our discipline. I hope you will all wish to participate in this debate – please let us have your comments through the website.

Finally, in amongst the discussion of the society, I would also like to comment on the very sad deaths of 3 past presidents of the Society, Bryan Wade, Graham Smart and Bernie Kieser. Tributes to these great people have been made elsewhere but I would like to record my own personal contributions to the Society and to British Periodontology generally. They will be sorely missed.

Francis Hughes
other person to have served as President on 2 occasions was Sir Wilfred Fish in the first year, 1949-1950 and then again in the Silver Jubilee year of 1973-1974. Bryan was also one of the Honorary members of the Society in recognition of his vast contribution over 30 years. Despite retiring 21 years ago Bryan kept a keen interest in the activities of the Society and what was happening in the world of Periodontology. 10 years ago he made a major contribution to the booklet on our history, which the Society produced as part of our Golden Jubilee celebrations. The letter he sent me in December 2008 was as a result of him receiving “the Winter edition of BSP News,” which reported on the very successful meeting organised by Graham Smart in Cambridge. This of course sparked happy memories for Bryan. A special note for our new editor is that Bryan was moved to comment “I find the News so ably edited by Philip Oover most interesting, though I did detect a few signs of disquiet in the last edition”. He then went on to comment on 2 mistakes he felt the Society had made over the years. Firstly he felt we had “missed an opportunity for Periodontology to have the same status as Orthodontics and Oral Surgery” and secondly he felt “far too much authority is being given to hygienists and that he had heard that apparently some patients have not seen a dentist for 2-3 years”. Still showing interest in the Society age 86 and 21 years retired is something lots of us might aspire to.

Bernie Kiesler died in September having fought cancer over the last year. It was typical of Bernie that he defied all predictions of the course of his illness, surviving longer than expected. Bernie was President of the BSP in 1989-1990 and was made an Honorary Member in 2001. During his time as President, Bernie was instrumental in probably the Society’s most important, which was to introduce Anne Hallowes as Administrative Manager to the Society, a post Anne has just retired from. This was a step which changed us from an organisation run on goodwill, and great personal effort and organisation by volunteers to one in which many of the other Societies envied. Bernie was a very active member of the Society who last presented his provocative thoughts at the Spring Meeting in Cambridge 2008 where one of his former students, Graham Smart, was President.

I had the privilege of sharing an office with Bernie for many years at the Eastman and learnt a huge amount from him about periodontology, dentistry, teaching, sport and life. Many of the students passing through his hands have benefited similarly from his teaching and questioning approach. For a man who preached a non-surgical approach to Periodontal therapy, he also had one of “the best pairs of hands” for surgery that I have seen. It was Bernie’s funeral the day of our September meeting and several members were torn as to where they should be. However, with the title “Plaque on Trial” I know that Bernie was somewhere at that meeting ready with a question or an argument to put forward. This is because Bernie was always a flamboyant ambassador for Perio who loved to challenge verbally and intellectually what was understood as accepted thinking. He provoked people into self-reflection, making you examine your beliefs and practices. He was a person you could go to for advice and he would be the first to help without expecting anything in return. Bernie liked and enjoyed people, particularly if he could help them in some way. He, like the Bryan and Graham will be a sad loss for us all.

Gareth Griffiths

A Big Thank You Ghilaine

Richard Palmer presented the work done within the EC to restructure the committees in order to meet the objectives identified in the Strategic Planning. The structure has been simplified and 4 committees have been identified: Congress, Education, Workshop and External Affairs. Among the objectives of the External Affairs committee are: to develop and improve communications with the National Societies with particular professional bodies; to develop and facilitate communication of key messages to the public; to promote the recognition of Periodontology as a Specialty; to promote and develop good relations with the Industry and sponsors. This new structure as well as the proposal of Mónica Guinea the EFP’s European Coordinator to offer her full time services to the EFP, were unanimously approved by the GA. Richard Palmer also pointed out the need for the EFP to go for forward by updating the by-laws. An Extraordinary General Assembly will be held in September 2009 for the revision of the by-laws and the appointment of the new Secretary General.

Maurizio Tonetti, Editor of the Journal of Clinical Periodontology, informed about an agreement with Wiley Blackwell that the 2009 JCP subscription cost (print and online) would remain the same as 2008. Maurizio also announced that the Winter edition of BSP News, which was published by Joanne Kamma, has been “missed an opportunity for Periodontology to have the same status as Orthodontics and Oral Surgery” and secondly he felt “far too much authority is being given to hygienists and that he had heard that apparently some patients have not seen a dentist for 2-3 years”. Still showing interest in the Society age 86 and 21 years retired is something lots of us might aspire to.

A Celebration of Contributions

During the last year the Society has lost 3 prominent members with the passing of Bryan Wade, Graham Smart and Bernie Kiesler. I was fortunate enough to have known all 3 and working closely with Graham and Bernie, but only encountering Bryan in the latter years of his career.

As President of the Society at the time, Bryan Wade wrote to me in December 2008 and early in his letter he said “Don’t feel that we really know each other though I think we must have met”. We had met, but I was in my 20’s at the time and Bryan was in his 60’s, so it is not that surprising that I was aware of him, but he did not know me. I first became aware of Bryan through the British Society of Periodontology in 1981 when I attended my first BSP meeting, Bryan of course was a prominent figure in the Society. I then moved to London in 1983 and became more aware of Bryan, at meetings in the London area and through contact with the postgraduates he taught. Although I never worked with Bryan and was never taught by him personally, I know what high regard people who were fortunate enough to have enjoyed this experience held him in. Bryan was one of the founder members of the BSP and was secretary 1954-1956. He was President of the Society for a similar period from 1960 to 1965 and held the post of Secretary of the BSP 1966-1968. Bryan was one of the key figures of British Perio and the founder of the British Society of Periodontology. I then moved to London in 1983 and became more aware of Bryan, at meetings in the London area and through contact with the postgraduates he taught. Although I never worked with Bryan and was never taught by him personally, I know what high regard people who were fortunate enough to have enjoyed this experience held him in. Bryan was one of the founder members of the BSP and was secretary 1954-1956. He was President of the Society for a similar period from 1960 to 1965 and held the post of Secretary of the BSP 1966-1968. Bryan was one of the key figures of British Perio and the founder of the British Society of Periodontology. Bryan was a teacher and research worker and made a significant contribution to Periodontology in general and the Society specifically.

Graham Smart died in June after a long battle with cancer. Graham was a member of the BSP for many years and was President of the Society in 2007-2008. Val Cleerehugh (immediate past President) to Ghilaine and myself (President elect) know how difficult it was for Graham to fill his role as President. Many have described Graham as a caring, kind, thoughtful, modest man who never ruffled anyone’s feathers. Graham was always inspiring, positive about his illness and never alluded to any difficulties, so we were all delighted that he was able to complete a memorable year as President. This included the first Pan Society meeting in Birmingham and members will recall his excellent Spring Meeting in Cambridge, with a very successful conference programme and a most memorable dinner which will live long in the memory of all who were there. Graham was well known as a practitioner, teacher and research worker and made a significant contribution to Periodontology in general and the Society.
After a breathtaking helicopter ride over the Himalayas we reached Samagon, a remote village in the Nubri valley (3800m above sea level), overlooked by the magnificent beauty of Mount Manaslu. After a breathtaking helicopter ride over the Himalayas we reached Samagon, a remote village in the Nubri valley (3800m above sea level), overlooked by the magnificent beauty of Mount Manaslu. After a breathtaking helicopter ride over the Himalayas we reached Samagon, a remote village in the Nubri valley (3800m above sea level), overlooked by the magnificent beauty of Mount Manaslu.
The President, Professor Gareth Griffiths, held his spring meeting for 265 delegates at Sheffield Hallam University on 13th & 14th April 2009. The theme of the meeting was ‘Aggressive Periodontitis’. After a welcome by the President, the session chair, Mr Raj Joshi introduced the opening speaker, Professor Urs Brägger, who had agreed to extend his presentation because Professor Tonetti was not able to be with us as a result of family illness.

In his presentation he discussed the biological and technical risks associated with tooth and implant supported fixed reconstructions in periodontally-affected dentitions. This was followed by an extended discussion session.

The meeting closed following a good panel discussion led by the session chair Professor Andrew Rawlinson, with keen questioning from the audience.

The Society is grateful to the major sponsors of the meeting, GlaxoSmithKline, Colgate and P&G Professional Oral Health.

We are also grateful to Ghilaine Ower our conference manager and Helen Clough, the new administrative manager, for their help in the organisation of this meeting.

BSP Serves Up Masterclass

The Sheffield meeting was an excellent conference in a great location and venue. It also scored another first in that two hands-on courses were run as part of the conference. The first was a specialist level masterclass in microsurgery delivered by Professor Marcus Hürzeler. The second was a course on examination and treatment planning for GDPs and hygienists delivered by Professor Andrew Rawlinson, Mr Raj Joshi, Mr Keith Figures and Mr Chris Dinsdale. Both courses were heavily over-subscribed and were considered to be highly successful. None of our meetings would happen without the extremely hard work and dedication of Ghilaine Ower, our conference manager, supported by Helen Clough, our new Administrative Manager.

Your editor attended the ‘Hürzeler Masterclass’ and I can report that all of the sessions were very well received by the delegates. Professor Hürzeler was a highly engaging speaker who began by covering ‘the Microsurgical Concept’ dealing with magnification issues, sutting materials, surgical instrument and flap design. Specific surgical techniques discussed included the Free Gingival Graft, Apically Repositioned Flap, Distal Wedge, Tunelling Techniques and Connective Tissue Grafting. These theoretical discussions were supplemented with sessions in the phantom head room where Marcus and his team performed live demonstrations on pigs heads before the delegates were let loose.

The technical skills of Marcus were humbling and everyone left with a sense of urgency to begin implementing the hints and tips that had been gleaned from the sessions.

Elsewhere, sessions on “Periodontal Probing and Treatment Planning for the Periodontal Patient” were being held. At coffee, your editor mingled with those delegates and it was clear that these sessions was also a thoroughly enjoyable and informative. Be assured, further Masterclasses are being organised, the next being in January 2010 (see page 15).

Spring Meeting 2009

The Saturday morning session, chaired by Professor Gerry Linden, opened with a joint presentation from the President accompanied by Professor Francis Hughes who addressed the issues of aetiopathogenesis and the difficulties of classification. We are grateful to both speakers who stepped in at short notice and helped to clarify this difficult topic.

Professor Mogens Kilian then spoke on genetic diversity among human subjects and within bacterial species. He referred to the JP2 clone of Aa which has enhanced virulence and causes higher prevalence of aggressive periodontitis in subjects of Mediterranean and West African origin.

After coffee Dr Luigi Nibali discussed genetic risk factors in aggressive periodontitis. He reviewed the evidence that genetic susceptibility could influence the host response to infections, and the interactions between our genetic susceptibility and our bacterial flora.

After lunch Professor Francis Hughes used the literature and his own findings to examine the prognostic factors determining treatment outcome in generalised aggressive periodontitis cases. He reviewed the evidence for tooth survival and non-responding sites, and considered the use of adjunctive treatments.

Professor Paul Hatton described how tissue engineering could be used to replace tissues lost as a result of periodontal diseases, but highlighted the difficulties of trying to use these techniques within the hostile environment of the mouth and more specifically the periodontal pocket.

After tea Dr Ulpee Darbar discussed the use of dental implants to rehabilitate young patients who, as a result of aggressive periodontitis, suffer from early tooth loss.

The meeting closed following a good panel discussion led by the session chair Professor Andrew Rawlinson, with keen questioning from the audience.

The Bob Ludlam Band then provided music for those who wished to dance the rest of the night away.

Ghilaine Ower, conference manager, supported by Sandra Orr, the assistant honorary manager and Helen Clough, our new Administrative Manager.

The Sheffield meeting was an excellent conference...
Autumn Meeting

2009 was a EuroPerio year, and EuroPerio 6 was held in Stockholm from 4-6 June 2009. This was an excellent meeting, with some outstanding presentations. There were also lots of learning opportunities for those who might think of hosting EuroPerio in the future, such as ensuring that lecture halls are big enough and that there are adequate catering facilities available. 232 delegates from the UK attended the meeting, a very impressive turnout.

The incumbent President, Professor Francis Hughes held his Autumn Scientific Meeting at The Royal Institution of Great Britain on 24th and 25th September 2009. This was a Diamond Jubilee meeting and began on the Thursday afternoon with the Jubilee Celebration of the Sir Wilfred Fish Prize and subsequent competition. Following this, a debate ensued with two short presentations, one "for" and one "against" a change of name for the Society made by Professor Nikos Donos and Dr Isobel Madden. Professor Nikos Donos proposed that a change of name would align the BSP with a number of other EFP member societies. Conversely, Dr Isobel Madden supported the proposal that within the name BSP, all aspects of the field are included and that we should not limit ourselves to particular areas of the subject and therefore the name should remain unchanged. This was a healthy debate and it was great to see so many contributions from the audience. No doubt this will be an ongoing discussion.

To mark the occasion, a Diamond Jubilee Dinner was held at One Whitehall Place where a fabulous time was had by all.

The Fish Group

Sir Wilfred Fish

The Sir Wilfred Fish Research Prize

The Sir Wilfred Fish Research Prize, instituted in 1970, is the most prestigious award bestowed by the Society. It is awarded annually with the object of encouraging researchers in the early stages of their career.

Delving into the BSP archives has uncovered the names of previous winners who will be familiar to many within the Society. These include our current President who was awarded the prize in 1985. The Autumn Diamond Jubilee meeting was a suitable forum for a celebration of this research activity with presentations from Professor Ian Mackenzie (the very first winner of the prize) Professor Gregory Seymour, Professor Iain Chapple, Dr Yu-Kang Tu and Dr Anousheh Alavi. As always information for anyone interested in competing for this prestigious award in the future, details can be found at the BSP website (http://www.bsperio.org.uk/awards.htm)

Helen Clough has been appointed as the Society's new administrative manager

Helen has an illustrious and varied background which ensures she will be perfectly suited for her new position with the Society. She has over 30 years’ experience of health care in both the NHS and the private sector, as well as the business sector. Within the NHS, she has worked at a senior level both in nursing and general management, and has recently been appointed as a lay member to the PCT in Leeds. She has worked as a magistrate for the last 10 years, with a special interest in family work. While working for Bradford Hospitals NHS Trust, she worked variously as a Systems Accountant, a Business Development Manager, and as the Complaints Manager for the Trust. She has also worked as the Legal Practice Manager for a firm of solicitors in West Yorkshire.

Helen lives in Yorkshire with Arthur and Dotty, with whom she enjoys fell walking in the Yorkshire dales. Arthur and Dotty are her two labradors. She spends what little free time she has cooking for friends, singing with her local choral society and indulging her passion for opera. She enjoys sailing and has recently discovered windsurfing although she admits it will be better when she learns how to turn. Helen brings a wealth of varied, and highly relevant expertise to her new position, and the Society is incredibly fortunate to have secured her services.

Helen Clough

Helen has been appointed as the Society’s new administrative manager.
Au Revoir from Anne Hallowes

I shall always be indebted to Bernie Kieser who, in 1989 when he became President of the British Society of Periodontology, recommended to Council that I should become the Society’s secretary. I had worked with Bernie for many months on the preparation of his book “Periodontics: A Practical Approach” and he was aware of my experience as an administrator and medical secretary. In addition to the day-to-day administration of the Society I organised the Spring and Autumn meetings and the Roadshows, the largest meeting being the joint meeting with the BDHA and IAP in May 2001 when Hubert Newman was President and which was attended by 650 delegates. However with the demands of an increasing membership as the Society grew, Council came to the conclusion that the time had come to take on a Conference Manager and in 2004 Chilaine Over was appointed and it has been a pleasure to work alongside her since then. Serving the Society has been a great honour and I have made many friends. It was a privilege to assist Frank Ashley in arranging the Society’s 50th Anniversary celebrations and to be invited to the Diamond Jubilee dinner held on 24 September 2009 as the Society’s first Emeritus Member.

My last official duty as the retiring Administrative Manager was to support members attending EuroPerio6 in Stockholm where I was delighted to meet a number of overseas members with whom I had been communicating for many years but whom I had never met. I have enjoyed the close working relationship with Monica Guineau of the European Federation of Periodontology and with the staff of Munksgaard in Denmark and latterly with Blackwells in Oxford. As I say au revoir, I wish to thank my husband, Ashley, for his unswerving support as well as our daughters, Suzanne and Kirsty, who helped with the preparation for meetings in the early years. Finally thank you to the Society for bestowing on me the honour of becoming the first Emeritus Member, thank you for the gifts which were presented to me by Gareth Griffiths at Cutlers’ Hall, Sheffield in March 2009 and thank you to the many members who have wished me well in my retirement. I wish the Society best wishes for its future as it faces new challenges and every good wish to Helen Clough, my successor.

I wish the Society best wishes for its future as it faces new challenges and every good wish to Helen Clough, my successor.

Professor Val Clerehugh has kindly produced a taster of what is to come from her in the future:

Since 1986, the British Society of Periodontology has advocated that adults be screened for periodontal diseases in General Dental Practice. These original guidelines were updated in 2001 with the inception of the Basic Periodontal Examination (BPE) in the UK (1) and similar systems operate in Europe and the USA.

However, at present there are no universally agreed guidelines for periodontal screening of children and adolescents. Therefore, currently, the British Society of Periodontology and the British Society of Paediatric Dentistry are working on a joint initiative led by Professor Val Clerehugh and Dr Susan Kindelan with the aim of formulating and disseminating periodontal guidelines for the under-18s which are quick and easy to use in practice (2) and based on evidence-based principles.

The proposed system involves assessing six index teeth (UR6, UR1, UL6, LL6, LL1 and LR6) using the usual WHO 621 style probe with a 0.5 mm ball end and black band at 3.5 to 5.5 mm. BPE codes 0-2 will be used in the 7- to 11-year-olds and the full range of codes 0, 1, 2, 3, 4 and * will be used in the 12+ years (Figures 1 and 2) - use of the index teeth in these age groups is to avoid the problem of false pockets (3). Guidance will also be given on which cases warrant referral for specialist care, such as those shown in Figure 3.

Website Update

The use of the BSP website continues to be at a high level with the number of hits now close on 1.4 million.

We have recently had a lot of new members join the BSP which is very encouraging. For those not familiar with the website there is a jobs page that enables you to post adverts. It is easy to use and you can also post jobs on behalf of non members. There is also a case studies page with 10 very interesting cases to view.

The website can also be used for posting details of periodontal courses. As a society we are keen to promote courses so if you have details of courses you want posting then you can send them to me to upload (anthony.roberts@manchester.ac.uk). The website also has the presentations from last year’s road shows available for you to look at. Based on the attendance levels and the feedback these would be well worth a look at and can be accessed from the Meetings presentations download page.

One part of the website that is overlooked by members is the forum. This provides an opportunity for members to discuss clinical issues amongst other things. One example of an interesting forum item is the discussion on the use of Periostat in the clinical area. Have a look at some of the threads. There are a couple of cases that have been discussed as well as worth a read.

If you are up for posting an item your self this is also very easy. You have to do is click on new topic and type away. You can also attach pictures or documents as well. The system will notify you of a response to your posted item by email when it occurs.

A discussion topic entitled “should we change the name of the BSP to include implants?” is now on the website... an ideal opportunity to have your say.

Caption Competition

There were 2 shining entries for the last caption competition and they win joint first place, "OK, OK I’ll dance with you Freda. Just stop twisting my arm...”

Ghilaine Ower

John Coventry: “Really, Freda, you didn’t have to twist my arm quite so far to get me to ask you to dance”

Hywel Evans

This year’s competition photograph was captured at EuroPerio6 in Stockholm 2009.

Entries to the editor please at anthony.roberts@manchester.ac.uk

All entries may be published... an ideal opportunity to have your say.

Coffee Time

For those of you with a few moments during a patient cancellation, try and find the names of all of the current Council members. If you are really struggling, the Editor would suggest that you remind yourselves who is on council by looking at the last page of this newsletter!

Future Meetings

Spring Meeting
Brighton 26 – 27th April 2009

20 years of Periodontal Regeneration - where are we now?

It is just over 20 years since periodontal regeneration techniques became a reality for our patients. Over this time there have been a number of techniques and products come along for this therapy yet at times results of these procedures can be disappointing. Recent scientific advances have also identified the possibility of new generations of regenerative therapies with wider application and more predictable outcomes, including the possible use of growth factors, tissue engineering scaffolds, and further down the line of stem cell and even gene therapies.

We have assembled a stellar cast of some of the foremost clinicians and scientists in the world in this field to speak at the meeting. These include Pier Paolo Cortellini, Leonardo Trombelli, Chris McCullough, William Giannobile, Richard Palmer and Dieter Bosshardt. The programme will consider the history of regenerative techniques both clinically and biologically, where we are today including practical tips and evidence on outcomes, and considering the potential for new therapies based on emerging regenerative technologies. We particularly hope that the programme will give an excellent mix of clinical detail and scientific background. In addition we will be running one parallel session on periodontal maintenance to be addressed by Phil Ower, Jeanie Suvan and Peter Heasman which we hope will be of particular interest to members of the dental team including dental hygienists.

The meeting will be held in the Brighton Dome, a venue very suitable for the society’s diamond jubilee celebrations and indeed the very stage on which ABBA won the Eurovision song contest! We expect also to have a large trade exhibition present. The Conference dinner will be held in the Hilton Brighton Metropole and will be followed by dancing to a great band – “Jamtastic”!

Brighton in spring is a great setting for this meeting so we hope you will put the event in your diaries now!

British Society of Periodontology Masterclass
Advanced Instrumentation Skills with Jeanie Suvan and Ruth Glover

Venue: Eastman Dental Hospital, London
Eastman Clinical Investigation Centre, 256 Grays Inn Road

Date: Saturday January 30th 2010 09.30 - 16.30

Cost: £275 to include refreshments and lunch

This course is designed for individuals who will be teaching instrumentation skills for subgingival debridement to young practitioners and hygienists.

The course will include:
- A review of current instrumentation techniques
- A variety of innovative hands-on teaching aids & practical exercises
- The use of a variety of hand and ultrasonic instrumentation
- Hints for increasing instrumentation efficiency
- The use and limitations of various model systems for teaching
- Teaching motivation

Maximum numbers: 20
6.5 hrs verifiable CPD

Booking opens on-line from 1st December 2009: www.bsperio.org.uk
Honorary Treasurer's Report

Report of the Honorary Treasurer of the British Society of Periodontology

2008 Accounts presented at the Annual General Meeting

Royal Institute of Great Britain, 25th September 2009

Professor Heasman opened his report to the membership by confirming that the accounting period was for the financial year 1st January to 31st December 2008 and that the accounts had been prepared in accordance with applicable Accounting Standards and the Statement of Recommended Practice – Accounting and Reporting by Charities (2005).

The financial summary for 2008 showed a deficit of (£55,083) due to a total expenditure of £286,413 outweighing the income of £231,330. Almost all of the deficit was because of the increased costs of running the Society which were associated with a number of items: Fellowship grants, prizes, Council expenses and accountancy costs. The cost of the electronic journal had also increased in relative terms as a direct consequence of the weak pound against the Euro and because this payment is made annually in Euros. The meetings in 2008 were run at a small deficit of £3,655 but this was reduced from the previous year.

The Treasurer recommended:

• To increase the subscriptions for all levels of membership the Society by £10.00 in 2010

• That Council, on behalf of the membership considers carefully appropriate measures to make savings for 2010

• That we retain the services of Richard Barwick as accountant to the Society

• That we retain the services of Herbert Parnell as independent auditors to the Society

The AGM voted to support the Honorary Treasurer and Council's recommendation that the Society retain the services of Mr Richard Barwick in the preparation of the accounts and of Herbert Parnell, Chartered Accountants, in the independent examiner or audit of the accounts.
