Presidential Address 2009 “WOw!!!”

Firstly I would like to thank all of you in the Society for the enormous honour you do me by asking me to serve as your president, particularly in this special Diamond Jubilee year.

My first challenge as your incoming president is to deliver a suitable address, something which has occupied my mind for some time. My very distinguished predecessors have ably tackled this task in many different ways such as adopting a range of autobiographical, clinical, scientific and political themes, typically in an erudite and witty way. By way of change I decided that I would make my own address into an advertisement, or perhaps more correctly an “infomercial,” to highlight some of the thinking behind the meetings I have planned for my presidential year, and along a rather tortuous way flag some other issues which excite or concern me.

I was initially inspired to follow a career in Periodontology by Frank Ashley at Guys, who by a delightful coincidence was BSP President 10 years ago when the society celebrated its Golden Jubilee. There are many others who have inspired me since including Fred Smalley and Newell Johnson at The London. Today I continue to find periodontology an exciting discipline, which in scientific, research and clinical arenas is still able to make me feel “wow!”

I am confident that you all also have your own “wow factors” in periodontology. Thus we come to the WOW test to test yourself by starting with a non-periodontal example to warm up - this year England won the Ashes at cricket and qualified for the World Cup in football with 2 games to spare!

Periodontal disease is an extremely interesting disease in terms of the pathogenic mechanisms and disease outcomes. Figure 1 shows where much of the action takes place in this disease. This histological side of a periodontal pocket definitely has a wow factor for me!

My own research in the cell and molecular mechanisms of tissue formation excite me in many ways, from the sheer capabilities of modern research methods where it is possible to examine the expression of all the genes in a cell or tissue pretty much in an afternoon’s experiment, to the basics insights these experiments can provide.

There is a basic clinical fact in periodontology which we all should remember well and that is just how effective periodontal treatment can be, essentially tooth survival rates following well conducted periodontal treatment, even in severe cases, are probably better than implant survival rates (figure 2).

Turning to the Society’s meetings this year, in Brighton we will assemble to discuss “20 years of Periodontal Regeneration – where are we now?” Since the introduction of Guided Tissue Regeneration about 20 years ago a number of innovations and techniques have come along. Certainly the explosion in the understanding of the biology of the regenerative processes involved contains much that is “wow” about it. However our clinical results and outcomes remain often frighteningly modest (and definitely not always “wow”).

The Autumn Scientific Meeting takes as its theme: “Plaque or Dental Plaque Really Cause Periodontal Disease?”

For me this is not just a gimmicky title but a serious question – when we are starting to understand just how complex the aetiology of this disease is, it is right that we should continue to say that plaque is the cause of periodontal disease. For example it may be true that smoking does not cause periodontal disease in the absence of bacteria, but conversely it may well be true that bacteria do not cause periodontitis without the presence of some other factors such as smoking. Here I suggest a few random statements that have a touch of wow about them:

- Smoking increases the risk of periodontitis by about 5 fold – what is most striking about this widely accepted statement is not that it might be true, but that 20 years ago we had no idea that this was the case, and thought it was all down to the bacteria.
- From the epidemiology, type II diabetes mellitus may be responsible for about half a million cases of periodontitis in the UK.
- Single gene mutations, without primary microbial alterations, can cause periodontitis both in animal models and in humans.
- A specific clone (JP2) of a specific bacterium (Aa) appears to cause periodontitis in a specific human population – perhaps the best evidence of a direct causal effect of bacteria in one type of periodontal disease.

Finally the word “wow” is sometimes used to denote something that is not totally exciting, but rather that is surprising or unexpected. A personal non-periodontal example is this:

In 1997 Radiohead released their seminal album “OK Computer,” widely regarded as one of the finest albums of all time. However that year the Mercury Music Prize was won by Roni Size and Reprazent for their album New Forms, which has not perhaps stood the test of time for that year’s judges.

In Periodontology there are many things that might fit this type of “wow” reaction. I have chosen a couple which precis information in the 1998 Adult Dental Health Survey. From this data and BSP Parameters of Care it can be estimated that up to 4 million people in the UK might benefit from some sort of Specialist Dental Care. Against this there are less than 300 periodontists on the Specialist list (approx 1:13 000) and around 900 members of the BSP (approx 1-4000).

What is even more disconcerting is that the prevalence of disease on this scale did not appear to be affected by dental attendance patterns. That is to say, you were just as likely to have periodontitis if you attended a dentist regularly compared with someone who never attended a dentist.

Thus in conclusion it seems that in population terms we may be only scratching the surface of treatment need. The BSP, on its 60th Birthday, is a thriving, vibrant society with many things to be proud of. However as its membership we all still have lots of challenges and responsibilities to promote and develop our discipline further.

Fig.1 Where the action is – Histology of a periodontal pocket.

A mature plaque biofilm (PL) is established on the root surface (RS). Rather handily through the pocket epithelium (EP), and leave the body to fret over the plaque and attempt to vacc it off the plaque. Essentially if this process is ineffective then the disease is progressive.

Fig.2 Radiographs taken of a patient prior to treatment (A) and 20 years later (B) following a course of conventional treatment and long term simple maintenance therapy. Perhaps remarkably, although in line with published outcome data, there is no evidence of further disease progression. Note also the remarkable survival of a Rochette plaque placed during initial therapy.

As we celebrate the Diamond Jubilee of the BSP it is very pleasing to report that the Society is thriving. Under the exceptional stewardship of Professor Gareth Griffiths our membership has continued to grow and is now approaching nearly 1000 members. Externally, the BSP is regarded (deservedly in my view) as one of the best organised, effective and most welcoming specialist societies in UK dentistry. This does not happen by accident. The hard work and commitment of the officers of the Society often goes largely unsung but does not happen by accident. The hard work and commitment of the officers of the Society often goes largely unsung but without their efforts we would not really function. In addition we have been running highly successful Roadshows around the country.

Our scientific meetings are important in presenting and discussing new concepts, techniques and opportunities in the discipline. However, as noted elsewhere, periodontology in the UK also faces a number of broader challenges relating to tackling the basic periodontal treatment needs of the population. I wonder if we have accepted for too long that in many parts of the profession periodontology seems to be a “Cinderella” topic with dentists sometimes seeing unconvincingly about efficacy of periodontal treatment and lacking in sufficient secondary care support where appropriate? The Society has been taking steps to address these issues for some time. The education committee, most ably led by Elaine Giedrys-Leepher, has taken many initiatives to promote the educational role of the BSP, and has been running highly successful Roadshows around the country. Similarly, following the initiative of past president Viv Ward the ASE survey has produced much to take forward in promotion of the subject throughout the professions.

I also believe that the BSP has an important role to play in developing clinical guidelines reflecting best practice based on the evidence base, and I am pleased to say that Council has recently agreed to establish a Clinical Guidelines Sub-committee as a standing sub-committee of BSP Council. In taking this forward the BSP will need to be able to promote these issues externally with stakeholder groups including dental professionals, PCTs, the DoH and, of course, patients. The recently published Steele Report has some important things to say about the possible structure of care delivery relevant to periodontal care and it is important that we do not let this opportunity slip without comment.

Members will be aware that we have recently initiated a debate as to whether the Society should change its name to reflect the growing importance of the practice of implant dentistry within periodontology. I do not wish to state my own personal preferences here but would comment that ultimately the wording of our name is much less important than the clear recognition that I think is evident that implant dentistry, particularly surgical aspects, is today very much a part of our discipline. I hope you will all wish to participate in this debate – please let us have your comments through the website.

Finally, in amongst the discussion of the society, I would also like to comment on the very sad deaths of 3 past presidents of the Society, Bryan Wade, Graham Smart and Bernie Kieser. Tributes to these great people have been made elsewhere but I would like to add my own contribution to the Society and to British Periodontology generally. They will be sorely missed.

Francis Hughes

The British Society of Periodontology at 60

The BSP thanks the Diamond Jubilee Sponsors for their support
Bernie Kieser died in September having fought cancer over the last year. It was typically courageous of Bernie that he defied all the predictions of the course of his illness, surviving longer than expected. Bernie was President of the Society in 1989-1990 and then was An Honorary Member in 2001. During his time as President, Bernie was instrumental in probably the Society’s broadest strategy, which was to introduce Anne Hallowed as Administrative Manager to the Society, a post Anne has just retired from. This was a step which changed us from an organisation run on goodwill, and general interest, to a more professionally run organisation in which many of the other Societies envied. Bernie was a very active member of the Society who last presented his provocative thoughts at the Spring Meeting in Cambridge 2008 where one of his former students, Graham Smart, was President.

I had the privilege of sharing an office with Bernie for many years at the Eastman and learnt a huge amount from him about periodontology, dentistry, teaching, sport and life. Many of the students passing through his hands have benefited similarly from his teaching and questioning approach. For a man who preached a non-surgical approach to Periodontal therapy, he also had one of “the best pair of hands” for surgery that I have seen. It was Bernie’s funeral the day of our September meeting and several members were torn as to where they should be. However, with the title “Plaque on Trial” I know that Bernie was somewhere right at that moment being questioned in a question or an argument to put forward. This is because Bernie was always a flamboyant ambassador for Perio who loved to challenge verbally and intellectually what was understood as accepted thinking. He provoked people into self-reflection, making you examine your beliefs and practices. He was a person you could go to for advice and he would be the first to help without expecting anything in return. Bernie liked and enjoyed people, particularly if he could help them in some way. He, like the Bryan and Graham will be a sad loss for us all.

Gareth Griffiths
Himalayan Dental Adventure!

By Shekha Bhuva

After a breathtaking helicopter ride over the Himalayas we reached Samagon, a remote village in the Nubri valley (3800m above sea level), overlooked by the magnificent beauty of Mount Manaslu (the world’s eighth highest mountain 8163m). Samagon (population approx 600) is geographically isolated. The closest road to Kathmandu (approx 600) is geographically isolated. The closest road to Kathmandu is a 6 day hike away. It has been called the Forgotten Kingdom; until 1992 there was a complete government restriction of foreigners into the area. Houses were simple one roomed stone and wood with the United Nations World Health Organisation and other organisations working hard to eradicate poverty and there is a 30% infant mortality rate.

The mission ran in conjunction with the Unicef Food Programme which supplied 11 months worth of rice and lentils to the area. Their initiative involved encouraging the local people to work together to build their own village in exchange for regular nutritional food. A great example of empowering people to help themselves.

By Shekha Bhuva, a Periodontology MClinDent trainee at Kings College London. This was a humbling and satisfying experience; full of adventure, breathtaking natural beauty, spirited and grateful local people and clinicians with a passion for humanitarian work. I feel honoured to be part of such a great project and would go back without hesitation!

Our restorative room had 2 wooden beds. Electricity only ran at specific times, so we had to make provisions to power our 2 handpieces. A headlight proved an invaluable aid. Here small cavities were restored with GIC, I couldn’t help but get my scalers out to provide a much needed clean finish. Extractions were carried out outdoors, away from triage and the restorative area so other patients didn’t get scared by the blood and also to keep it clean! All dental instruments underwent autoclave sterilisation so instruments were always available. Although this was the first dental experience for most locals, they let us carry out work without fuss and were so appreciative of the service we were able to offer. The main sugar intake was sweet tax, with few western sugar staples infiltrating into this remote area. Although a small percentage of children had healthy teeth, many villagers had suffered for a long time with untreated dental diseases, namely periodontics and caries.

In total we examined approximately 600 patients, some walking for 5 hours from surrounding villages and hamsteries to reach us. We placed over 250 fillings and extracted 320 teeth. At least 700 toothbrushes and toothpastes were distributed. A great initiative by one of the dentists was to give all the children animal balloons! I can’t even count how many of these we handed out! I feel fortunate that as a dentist to be able to offer some small service to this village. Leaving behind promises of our normal lives for just a week really made me appreciate how much we take for granted. It is clear that life in Samagon is tough, with a great need for more medical and dental care, especially female care as there is a high mortality associated with pregnancy and childbirth.

Acknowledgments.

A huge thank you for all those who supported us through this mission. Brua Oral & Colgate, Denalty Henry Sheen, DEC, GAT Dental School, Bhuva Dental Practice, Hemet Hempstead and all others. Thanks to the NHS WFP, and Shekha for her hard work and to our patients for their support and understanding.

Prizes Awarded

The Society awarded the 2008 Sir Winifred Fish Research Prize to Dr Mike Milward of Birmingham University for his project "Modulation of the host response to periodontal bacteria using a natural antioxidant". The certificate was awarded at the Spring 2009 meeting in Sheffield.

Dr Louise O'Dowd of Newcastle Dental Hospital was awarded a Certificate of Merit for her project "Patient perspectives on the impact of periodontal disease" and this certificate was presented at the Spring 2009 AGM.

There were 3 applications for the Frank Ashley Fish Research Prize this year, all of which were of a high standard. The winner was Cameron Herbert from Glasgow Dental School for his project "The antimicrobial activity of Tegosine against periodontal pathogen plaque formers". The certificate was awarded at the Spring 2009 meeting in Sheffield.

The two awards funded were to Kathyn Durey, SHO at Aberdeen Royal Infirmary for her project "Audit of the quality of periodontal referral letters" and to Prof. Steven Carr of the University of Newcastle for his project "A multi-centred audit into patient awareness of the effect of smoking on periodontal disease in South Wales".

There were no applications for the Research Grant or the Clinical Fellowship each project.

Grants Available

The Society has had a successful year under the Presidency of Professor Gareth Griffiths. The total membership has increased slightly since last year with 509 members, up from 89 last year (Being an increase of around 3%). The membership comprises: 7 Honorary Members, 405 Full Members (of whom 93 are overseas), 29 Post-graduate members, 33 SPRs, 18 First 4 years members, 3 Undergraduate members, 36 Associate members, 137 Hygienists/Therapists, 302 Associates, 137 Hygienists/Therapists.

This was a humbling and satisfying experience; full of adventure, breathtaking natural beauty, spirited and grateful local people and clinicians with a passion for humanitarian work. I feel honoured to be part of such a great project and would go back without hesitation!

Road shows continue...

The theme for the road shows is “Core Values for Treating Patients in Practice” focussing on Assessing, Diagnosing and Treating.

The road shows have been highly successful, and have been run in Dundee, Newcastle, Southport and Manchester, with a total of 809 delegates attending to date. The feedback has been uniformly outstanding, and the next road show will be held on 17 April 2010 as part of the Founders and Benefactors Event at Newcastle University.

Congratulations Prof! Prof Ower’s academic career has included the study of the inflammatory response to periodontal bacteria using a natural antioxidant. This was an outstanding achievement, and the certificate was awarded at the Spring 2009 meeting in Sheffield.

The Royal Bestowal and Decoration for Ubele van der Velden.

Ubele van der Velden, a great friend to the BSP and Honorary Member, has been deeply decorated by the Mayor of his home town (Amstelveen). Ubele was clearly honoured to receive a Royal Bestowal and Decoration on September 18, after presenting a retrospective talk at 40 years of periodontology with ideals for the future at a scientific symposium. Ubele was decorated with ‘Officer of the Order of Orange Nassau’. Apparently the mayor gave a very nice speech. I say ‘apparently’ as unfortunately my editor was not present and not familiar with the Dutch language. Those that are can view the comments by Jan van Zaanen, the Mayor of the City of Amstelveen, at the following website: http://www.ernstvaen.nl/revue/his/16/231548&langid=3

The President, Professor Gareth Griffiths, held his spring meeting for 265 delegates at Sheffield Hallam University on 13th & 14th April 2009. The theme of the meeting was “Aggressive Periodontitis.” After a welcome by the President, the session chair, Mr Raj Joshi introduced the opening speaker, Professor Urs Brägger, who had agreed to extend his lecture because Professor Tonetti was not able to be with us as a result of family illness.

In his presentation he discussed the biological and technical risks associated with tooth and implant supported fixed reconstructions in periodontally-affected dentitions. This was followed by an extended discussion session. The conference dinner was held in the splendid Cutler’s Hall.

During proceedings Professor Griffiths awarded the Sir Wilfred Fish prize to Dr Mike Millward, and received a cheque from Mr Simon Gambold of Henry Schein in recognition of the partnership agreement with the Society. He also conferred emeritus membership of the Society on Anne Hallowes, who has retired, having served as Administrative Manager for 20 years. He presented Anne with a number of gifts in appreciation of her work and support.

Gifts were also presented to Ghilaine Ower, conference manager and to Sandra Orr, the assistant honorary secretary. The new administrative manager, Helen Clough, was also welcomed into the Society.

The Bob Ludlam band then provided music for those who wished to dance the rest of the night away.

The Saturday morning session, chaired by Professor Gerry Linden, opened with a joint presentation from the President accompanied by Professor Francis Hughes who addressed the issues of aetio-pathogenesis and the difficulties of classification. We are grateful to both speakers who stepped in at short notice and helped to clarify this difficult topic.

Professor Mogens Kilian then spoke on genetic diversity among human subjects and within bacterial species. He referred to the JPZ clone of Aa which has enhanced virulence and causes higher prevalence of aggressive periodontitis in subjects of Mediterranean and West African origin.

After coffee Dr Luigi Nibali discussed genetic risk factors in aggressive periodontitis. He reviewed the evidence that genetic susceptibility could influence the host response to infections, and the interactions between our genetic susceptibility and our bacterial flora.

After lunch Professor Francis Hughes used the literature and his own findings to examine the prognostic factors determining treatment outcome in generalised aggressive periodontitis cases. He reviewed the evidence for tooth survival and non-responding sites, and considered the use of adjunctive treatments.

Professor Paul Hatton described how tissue engineering could be used to replace tissues lost as a result of periodontal disease, but highlighted the difficulties of trying to use these techniques within the hostile environment of the mouth and more specifically the periodontal pocket.

After tea Dr Upsee Darbar discussed the use of dental implants to rehabilitate young patients who, as a result of aggressive periodontitis, suffer from early tooth loss.

The meeting closed following a good panel discussion led by the session chair Professor Andrew Rawlinson, with keen questioning from the audience.

The Society is grateful to the major sponsors of the meeting, GlaxoSmithKline, Colgate and P&G Professional Oral Health.

We are also grateful to Ghilaine Ower our conference manager and Helen Clough, the new administrative manager, for their help in the organisation of this meeting.

Elsewhere, sessions on “Periodontal Probing and Treatment Planning for the Periodontal Patient” were being held.

At coffee, your editor mingled with those delegates and it was clear that these sessions was also a thoroughly enjoyable and informative. Be assured, further Masterclasses are being organised, the next being in January 2010 (see page 15).
Autumn Meeting

2009 was an excellent meeting, with some outstanding presentations. There were also lots of learning opportunities for those who might think of hosting EuroPerio in the future, such as ensuring that lecture halls are big enough and that there are adequate catering facilities available. 232 delegates from the UK attended the meeting, a very impressive turnout.

Professor Griffiths represented the Society well and his flag waving at the opening ceremony was second to none (see photo with Union Jack). As you can see from the photographs of the event, this was certainly a grand occasion, with many BSP members attending and presenting.

The incumbent President, Professor Francis Hughes held his Autumn Scientific Meeting at The Royal Institution of Great Britain in London on 24th and 25th September 2009. This was a Diamond Jubilee meeting and began on the Thursday afternoon with the 'Jubilee Celebration of the Sir Wilfred Fish Prize' and subsequent competition. Following this, a debate ensued with two short presentations, one “for” and one “against” a change of name for the Society made by Professor Nikos Donos and Dr Isobel Madden. Professor Nikos Donos proposed that a change of name would align the BSP with a number of other EFP member societies. Conversely, Dr Isobel Madden supported the proposal that within the name BSP, all aspects of the field are included and that we should not limit ourselves to particular areas of the subject and therefore the name should remain unchanged. This was a healthy debate and it was great to see so many contributions from the audience. No doubt this will be an ongoing discussion.

To mark the occasion, a Diamond Jubilee Dinner was held at One Whitehall Place where a fabulous time was had by all.

The Friday morning began with the Annual General Meeting which was followed by the presedential handover. Professor Hughes delivered his Presidential address “Wow!!” see Page 2 in this newsletter.

The remainder of the day was spent putting ‘Plaque on Trial’ with a series of distinguished speakers tackling the issue of whether plaque really does cause periodontal disease. Professors Dietrich (Birmingham), Bergström (Stockholm), Needleman (London), Preshaw (Newcastle) and Curtis (London) then examined this area in detail. This was a great meeting and a wonderful Jubilee Celebration.

The Sir Wilfred Fish Research Prize

The Sir Wilfred Fish Research Prize, instituted in 1970, is the most prestigious award bestowed by the Society. It is awarded annually with the object of encouraging researchers in the early stages of their career.

Delving into the BSP archives has uncovered the names of previous winners who will be familiar to many within the Society. These include our current President who was awarded the prize in 1985. The Autumn Diamond Jubilee meeting was a suitable forum for a celebration of this research activity with presentations from Professor Ian Mackenzie (the very first winner of the prize) Professor Gregory Seymour, Professor Iain Chapple, Dr Yu-Kang Tu and Dr Arnooseh Alavi. As always information for anyone interested in competing for this prestigious award in the future, details can be found at the BSP website. (http://www.bsperio.org.uk/awards.htm)

Helen Clough has been appointed as the Society’s new administrative manager

Helen has an illustrious and varied background which ensures she will be perfectly suited for her new position with the Society. She has over 30 years’ experience of health care in both the NHS and the private sector, as well as the business sector. Within the NHS, she has worked at a senior level both in nursing and general management, and has recently been appointed as a lay member to the PCT in Leeds. She has worked as a magistrate for the last 10 years, with a special interest in family work. While working for Bradford Hospitals NHS Trust, she worked variously as a Systems Accountant, a Business Development Manager, and as the Complaints Manager for the Trust. She has also worked as the Legal Practice Manager for a firm of solicitors in West Yorkshire.

Helen lives in Yorkshire with Arthur and Dotty, with whom she enjoys fell walking in the Yorkshire dales. Arthur and Dotty are her two labradors. She spends what little free time she has cooking for friends, singing with her local choral society and indulging her passion for opera. She enjoys sailing and has recently discovered windsurfing although she admits it will be better when she learns how to turn.

Helen brings a wealth of varied, and highly relevant expertise to her new position, and the Society is incredibly fortunate to have secured her services.
Professor Val Clerehugh has kindly produced a taster of what is to come from her in the future:

Since 1986, the British Society of Periodontology has advocated that adults be screened for periodontal diseases in General Dental Practice. These original guidelines were updated in 2001 with the inception of the Basic Periodontal Examination (BPE) in the UK (1) and similar systems operate in Europe and the USA.

However, at present there are no universally agreed guidelines for periodontal screening of children and adolescents. Therefore, currently, the British Society of Periodontology and the British Society of Paediatric Dentistry are working on a joint initiative led by Professor Val Clerehugh and Dr Susan Kindelan with the aim of formulating and disseminating periodontal guidelines for the under 18s which are quick and easy to use in practice (2) and based on evidence-based principles.

The proposed system involves assessing six index teeth (UR6, UR1, UL6, LL6, LL1 and LR6) using the usual WHO 621 style probe with a 0.5 mm ball end and black band at 3.5 to 5.5 mm. BPE codes 0-2 will be used in the 7- to 11-year-olds and the full range of codes 0, 1, 2, 3, 4 and * will be used in the 12- to 17-year-olds (Figures 1 and 2) - use of the index teeth in these age groups is to avoid the problem of false pockets (3). Guidance will also be given on which cases warrant referral for specialist care, such as those shown in Figure 3.

Figure Legends

Figure 1. BPE codes and index teeth for children and adolescents

Figure 2a. Index teeth UR6, UR1, UL6, LL6, LL1, LR6 and grid for recording simplified BPE in the under 18s; b) WHO 621 probe; and c) probe being used to undertake simplified BPE on LL6 index tooth

Website Update

The use of the BSP website continues to be at a high level with the number of hits now close on 1.4 million.

We have recently had a lot of new members join the BSP which is very encouraging. For those not familiar with the website there is a jobs page that enables you to post adverts. It is easy to use and you can also post jobs on behalf of non-members. There is also a case studies page with 10 very interesting cases to view.

The website can also be used for posting details of periodontal courses. As a society we are keen to promote courses so if you have details of courses you want posting then you can send them to me to upload (addyld@cardiff.ac.uk). The website also has the presentations from last year’s road shows available for you to look at. Based on the attendance levels and the feedback these would be well worth a look at and can be accessed from the Meetings presentations download page.

One part of the website that is overlooked by members is the case studies page with 10 very interesting cases to view.

If you hyperlink to the members area from the home page the forum link is on the left hand side of the page (you will need your members username and password - if you have forgotten it there is a built in system to send you a reminder) Once you are into the forum the most useful forum is the clinical one. Have a look at some of the threads. There are a couple of cases that have been discussed as well and are worth a read.

If you are up for posting an item your self this is also very easy. You have to do is click on new topic and type away. You can also attach pictures or documents as well. The system will notify you of a response to your posted item by email when it occurs.

A discussion topic entitled “should we change the name of the BSP to include implants?” is now on the website... an ideal opportunity to have your say.

Liam Addy, Webmaster

Advanced Instrumentation Skills with Jeanie Suvan and Ruth Glover

Venue: Eastman Dental Hospital, London
Eastman Clinical Investigation Centre, 256 Grays Inn Road

Date: Saturday January 30th 2010

Cost: £275 to include refreshments and lunch

This course is designed for individuals who will be teaching instrumentation skills for subgingival debridement to young practitioners and hygienists.

The course will include:

- A review of current instrumentation techniques
- A variety of innovative hands-on teaching aids & practical exercises
- The use of a variety of hand and ultrasonic instrumentation
- Hints for increasing instrumentation efficiency
- The use and limitations of various model systems for teaching
- Teaching motivation

Maximum numbers: 20
6.5 hrs verifiable CPD

Booking opens on-line from 1st December 2009: www.bsperio.org.uk

Future Meetings

Spring Meeting
Brighton 25 – 27th April 2009

20 years of Periodontal Regeneration - where are we now?

It is just over 20 years since periodontal regeneration techniques became a reality for our patients. Over this time there have been a number of techniques and products come along for this therapy yet at times results of these procedures can be disappointing. Recent scientific advances have also identified the possibility of new generations of regenerative therapies with wider application and more predictable outcomes, including the possible use of growth factors, tissue engineering scaffolds, and further down the line of stem cell and even gene therapies.

We have assembled a stellar cast of some of the foremost clinicians and scientists in the world in this field to speak at the meeting. These include PierPaolo Cortellini, Leonardo Trombelli, Chris McCulloch, William Giannobile, Richard Palmer and Dieter Bosshardt. The programme will consider the history of regenerative techniques both clinically and biologically, where we are today including practical tips and evidence on outcomes, and considering the potential for new therapies based on emerging regenerative technologies. We particularly hope that the programme will give an excellent mix of clinical detail and scientific background. In addition we will be running one parallel session on periodontal maintenance to be addressed by Phil Over, Jeanie Suvan and Peter Heasman which we hope will be of particular interest to members of the dental team including dental hygienists.

The meeting will be held in the Brighton Dome, a venue very suitable for the society’s diamond jubilee celebrations and indeed the very stage on which ABBA won the Eurovision song contest! We expect also to have a large trade exhibition present. The Conference dinner will be held in the Hilton Brighton Metropole and will be followed by dancing to a great band – “Jamtastic”!

Brighton in spring is a great setting for this meeting so we hope you will put the event in your diaries now!

Caption Competition

There were 2 shining entries for the last caption competition and they win joint first place, “OK, OK I’ll dance with you Freda. Just stop twisting my arm...”  Ghlilane Ower

John Coventry: “Really, Freda, you didn’t have to twist my arm quite so far to get me to ask you to dance”  Hywel Evans

This year’s competition photograph was captured at EuroPerio6 in Stockholm 2009.

Entries to the editor please at anthony.roberts@manchester.ac.uk

All entries may be published... and the Editor’s decision is final!

Coffee Time

For those of you with a few moments during a patient cancellation, try and find the names of all of the current Council members. If you are really struggling, the Editor would suggest that you remind yourselves who is on council by looking at the last page of this newsletter!

**Council Members**

**President**  
Professor F J Hughes

**Senior Vice President**  
Dr I Madden

**Vice Presidents**  
Prof G J Linden

**Honorary Secretary**  
Dr P M Fredshaw

**Honorary Treasurer**  
Professor P A Heasman

**Honorary Assistant Secretary**  
Dr W Turner (2009-2010)  
Dr C Irwin (2010-2011)

**Honorary Editor**  
Dr A Roberts

**Commercial Liaison Officer**  
Dr M Lee

**Webmaster**  
Dr L Addy

**President-Elect for 2011-2012**  
Dr W McLaughlin

**Council Member**  
Professor I Needelman

**Council Member**  
Professor N Donis

**Council Member**  
Dr S Manton

**Council Member**  
Dr P Weston

**Dental Pract: Chairman**  
Dr N Parfia

**Teachers’ Forum: Chairman**  
Dr W Turner

**Reps: Educational Initiative**  
Dr E Giedrys-Leeper

**Reps: Specialist Registrars**  
Mr Aws Alani

**Dental Pract: Secretary**  
Dr P Barnes

**Honorary Treasurer’s Report**

*Report of the Honorary Treasurer of the British Society of Periodontology*  
2008 Accounts presented at the Annual General Meeting  
Royal Institute of Great Britain, 25th September 2009

Professor Heasman opened his report to the membership by confirming that the accounting period was for the financial year 1st January to 31st December 2008 and that the accounts had been prepared in accordance with applicable Accounting Standards and the Statement of Recommended Practice – Accounting and Reporting by Charities (2005).

The financial summary for 2008 showed a deficit of (£55,083) due to a total expenditure of £286,413 outweighing the income of £231,330. Almost all of the deficit was because of the increased costs of running the Society which were associated with a number of items: Fellowship grants, prizes, Council expenses and accountancy costs. The cost of the electronic journal had also increased in relative terms as a direct consequence of the weak pound against the Euro and because this payment is made annually in Euros. The meetings in 2008 were run at a small deficit of £3,655 but this was reduced from the previous year.

The Treasurer recommended:

- To increase the subscriptions for all levels of membership the Society by £10.00 in 2010
- That Council, on behalf of the membership considers carefully appropriate measures to make savings for 2010
- That we retain the services of Richard Barwick as accountant to the Society
- That we retain the services of Herbert Parnell as independent auditors to the Society

The AGM voted to support the Honorary Treasurer and Council’s recommendation that the Society retain the services of Mr Richard Barwick in the preparation of the accounts and of Herbert Parnell, Chartered Accountants, in the independent examiner or audit of the accounts.
