Supplementary Figure 1: Knockdown of luciferase reporter gene in Luc PC3 cells by Lipofectamine, TR8-, TR8+ and UR8- complexed with 100 nM of either scramble siRNA or Luciferase siRNA. Luciferase gene expression was normalised to the non-silencing counterpart whose expression was set to 100 %. Data are presented as mean \pm SD (***) $p < 0.001$, $n=3$)
