A. UCCLBBS124

- UCCLBBS124
- UCCLBBS124 + phage 521B
- UCCLBBS124 + phage 3-521
- UCCLBBS124 + phage SAC12B

B. UCCLB521

- UCCLB521
- UCCLB521 + phage 521B
- UCCLB521 + phage 3-521

C. SA-C12

- SA-C12
- SA-C12 + phage SAC12B
Figure S1: Growth of (A) *Lb. brevis* beer-spoiling strain UCCLBBS124, (B) *Lb. brevis* strain UCCLBS21 and (C) *Lb. brevis* strain SA-C12 when challenged with lytic phages (MOI = 1 when the culture reached an OD$_{600nm}$ of 0.2). A culture of the bacterial strain where no phage was added was used as a control.
