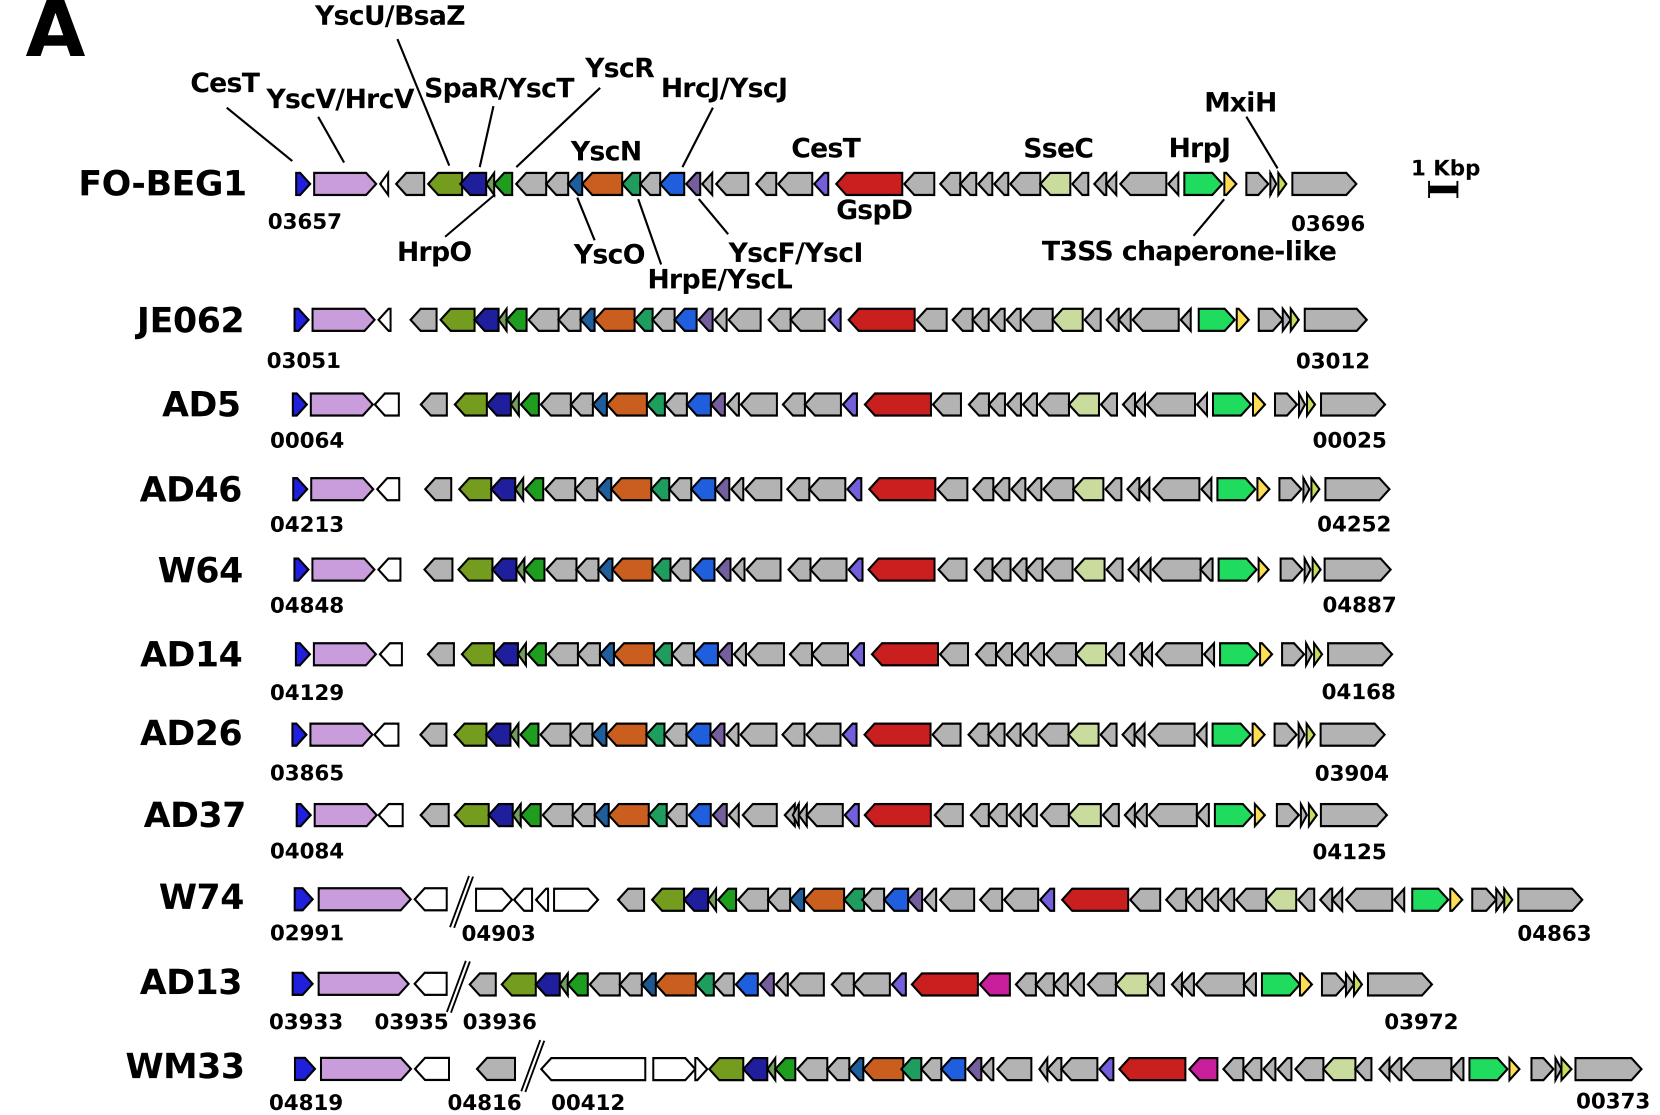

**Figure S4** Type 3 secretion system in the *Pseudovibrio* genus. In **A** are reported the gene clusters coding for the T3SS identified in the *Pseudovibrio* genomes. Forward slashes separate genes identified in separate contigs. A representative T3SS gene cluster for *Pseudovibrio* was then used as query against all available GeneBank bacterial genomes, with the aim of searching homologous clusters. Only the best two hits of this analysis are shown in **B**. For all gene clusters, similar colours indicates homologous genes. In gray are reported homologous genes shared amongst the strains, but not identified as part of the T3SS structure with the approach we used.
