Supplemental data, Las Heras et al Fig S3.

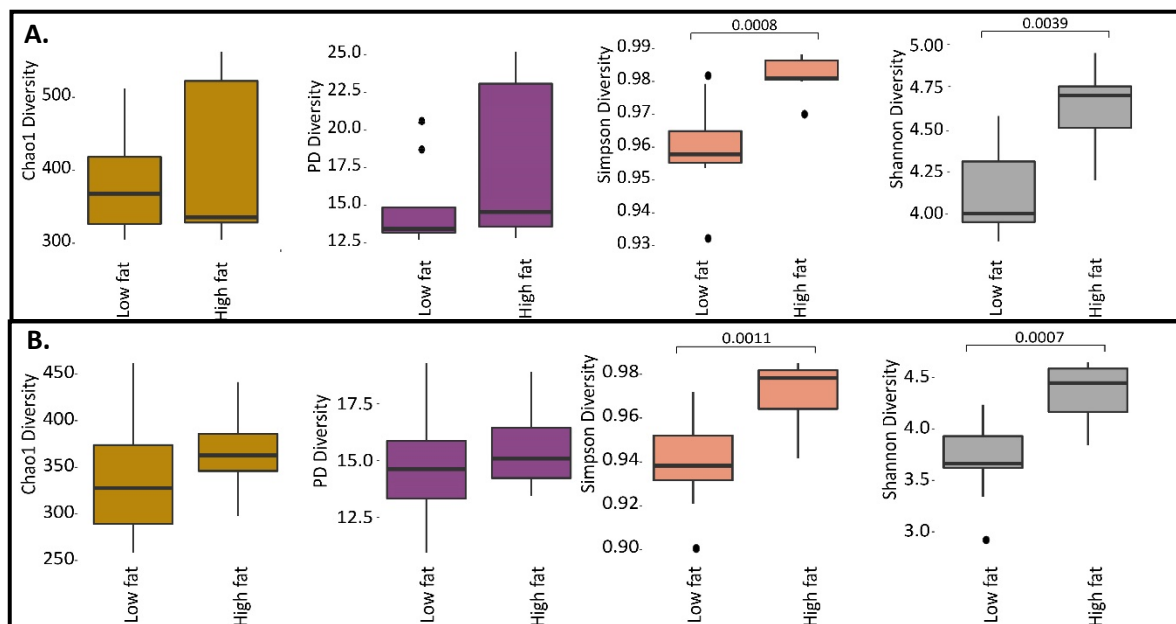

Figure S3. Assessment of diversity within the sample (Alpha diversity) in the groups fed high-fat or low-fat diets. Chao1 as a measurement of sample coverage. PD (phylogenetic diversity) used to consider affiliation between taxa within diversity. Simpson and Shannon used as an estimation of richness and evenness respectively. **A.** Changes in intestinal microbiota communities caused by short-term increased dietary fat (D0 to D13). **B.** Changes in intestinal microbiota communities upon infection with *L. monocytogenes*, modulated by short-term increased dietary fat (D13 to D16).
