Table DS1 List of criteria used in Stage I of the development process, adapted from Streiner et al.[1]
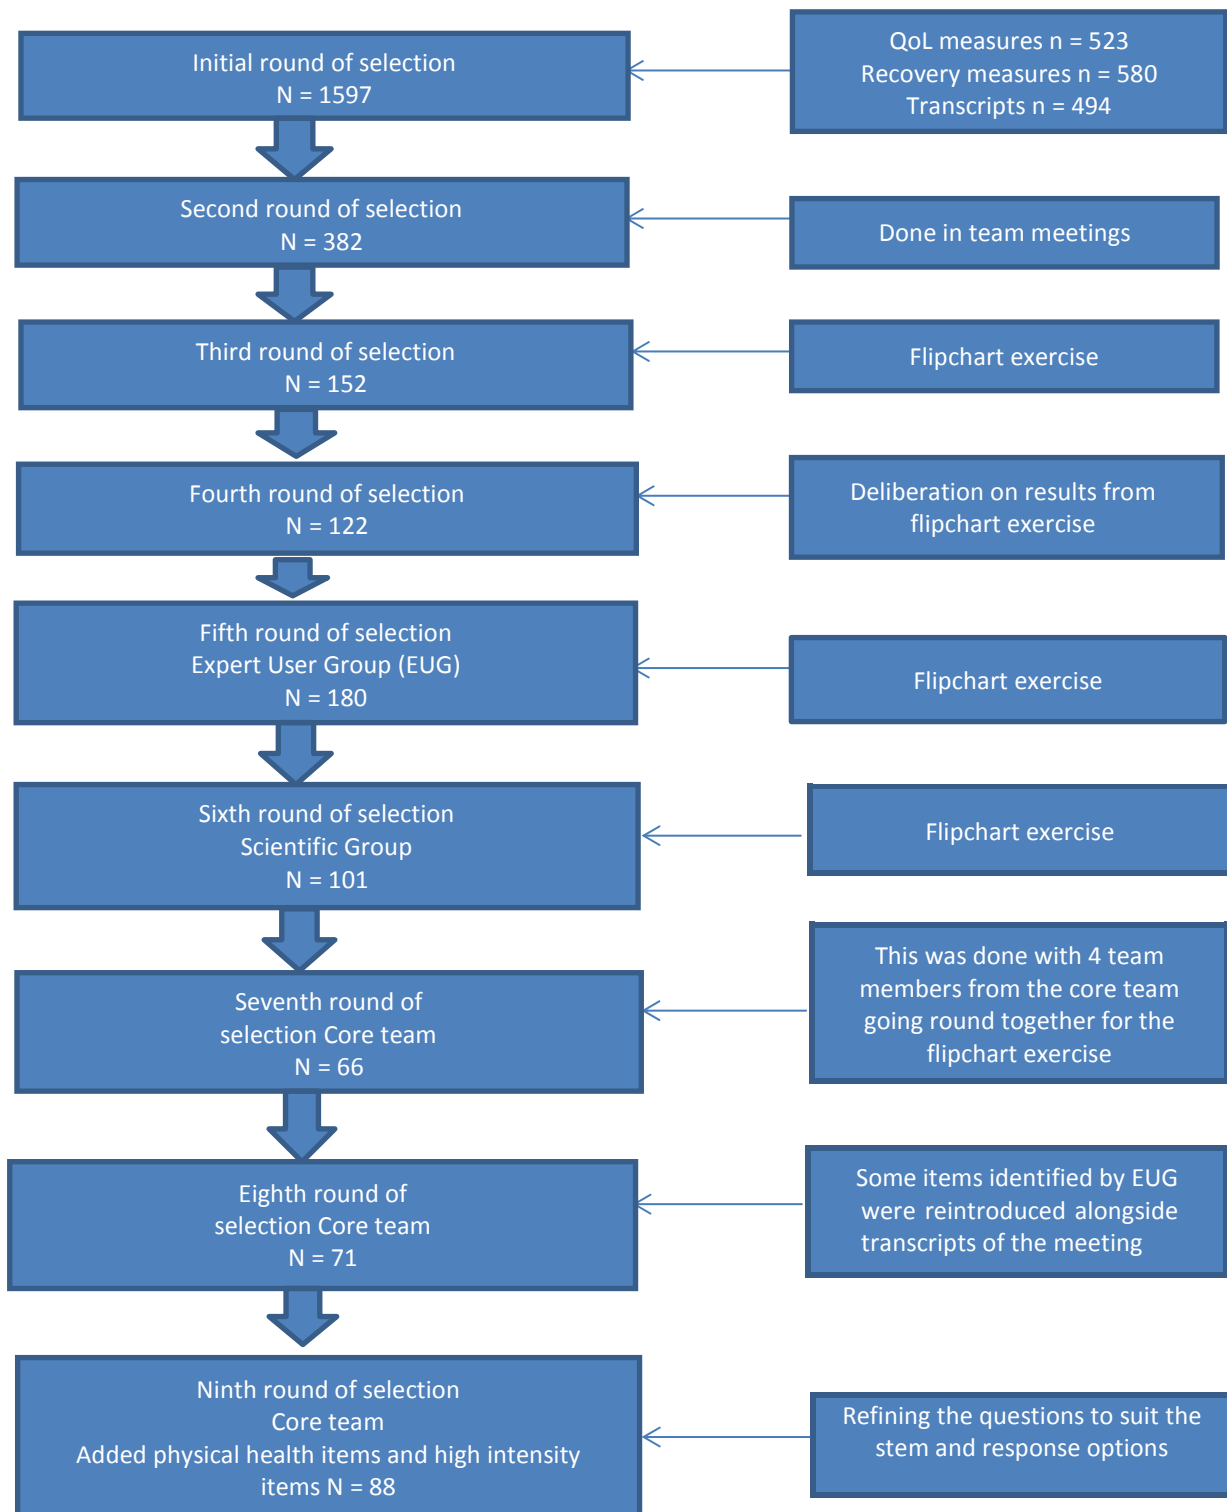

1.	Reading Level	Rule of thumb: reading skills should not exceed those of a 12 year old
2.	Ambiguity	Poorly worded items Even straightforward items may pose a problem if not applicable, e.g. I like my spouse is problematic if someone does not a spouse
3.	Double –barrelled question	This is where two or more questions are asked at the same time and the answers for each may be different. This may also be where two different concepts are compounded e.g. anxiety and depression
4.	Jargon	The vocabulary should not be technical and should be part of everyday vocabulary.
5.	Value-laden words	Judgmental statements may prejudice the respondent and should therefore be avoided (e.g. having more social contact may not be seen to be better by everyone)
6.	Positive and negative wording	Negatively worded items should be avoided e.g. it is better to have the item ' I feel ill most of the time' compared with 'I rarely feel well'
7.	Length of items	Should be as short as possible but not too short that it loses comprehensibility

In addition to the above criteria, the ReQoL research team used the following:

8.	Too specific to a lifestyle or a diagnosis	e.g. referring to employment when many respondents may not work e.g. hearing voices is too specific
9.	Makes comparisons over time	e.g. the phrase 'compared to usual' in an item
10.	Does not lend itself to change over time	e.g. character traits of people or circumstances that NHS services cannot change

Figure DS1 Stage I Generation of candidate items: Item reduction flow chart

Initial round of selection
N = 1597

QoL measures n = 523
Recovery measures n = 580
Transcripts n = 494

Second round of selection
N = 382

Done in team meetings

Third round of selection
N = 152

Flipchart exercise

Fourth round of selection
N = 122

Deliberation on results from
flipchart exercise

Fifth round of selection
Expert User Group (EUG)
N = 180

Flipchart exercise

Sixth round of selection
Scientific Group
N = 101

Flipchart exercise

Seventh round of
selection Core team
N = 66

This was done with 4 team
members from the core team
going round together for the
flipchart exercise

Eighth round of
selection Core team
N = 71

Some items identified by EUG
were reintroduced alongside
transcripts of the meeting

Ninth round of selection
Core team
Added physical health items and high intensity
items N = 88

Refining the questions to suit the
stem and response options

The initial selection of items was done by two researchers from the core team. The second, third and fourth rounds of selection were performed by the core team in a series of meetings. During the 'flipchart exercise', items were written on post-it notes on flipcharts grouped by themes and sub-themes. Members went round the room either alone or in small groups and put a sticker next to their preferred items. Votes for each item were counted and were used to inform item selection.

Table DS2 Missing data of the 40-item set by item under each theme

Theme	Item	Total sample n = 4266	
Activity	I found it difficult to get started with everyday tasks	139	3%
	I did things I found rewarding	166	4%
	I neglected myself	188	4%
	I avoided things I needed to do	173	4%
	I enjoyed what I did	164	4%
Belonging and Relationships	People around me caused me distress	145	3%
	I felt lonely	161	4%
	I felt able to trust others	171	4%
	I felt people did not want to be around me	166	4%
	I thought people cared about me	169	4%
Choice, Control and Autonomy	I could do the things I wanted to do	161	4%
	I felt overwhelmed by my problems	166	4%
	I had the opportunity to do the things I wanted	151	4%
	I felt unable to cope	175	4%
	I felt in control of my life	180	4%
Hope	I felt hopeful about my future	181	4%
	I felt hopeless	162	4%
	Everything in my life felt bad	162	4%
	I thought my life was not worth living	152	4%
Self-perception	I felt like a failure	157	4%
	I felt confident in myself	163	4%
	I felt at ease with who I am	162	4%
	I valued myself as a person	140	3%
	I disliked myself	182	4%
Wellbeing	I felt calm	137	3%
	I felt miserable	143	3%
	I felt safe	150	4%
	I was disturbed by unwanted thoughts and feelings	155	4%
	I felt irritated	165	4%
	I felt angry	154	4%
	I felt relaxed	177	4%
	I felt terrified	179	4%
	I felt everything was an effort	166	4%
	I felt panic	159	4%
	I felt happy	174	4%
	I found it hard to concentrate	159	4%
	I worried too much	161	4%
	I felt anxious	181	4%
	I had problems with my sleep	149	3%
Physical health		299	7%§

§This was higher than the rest due to the presentation of the question in the survey booklet.
