## Combination of electroporation delivered metabolic modulators with low-dose chemotherapy in osteosarcoma

### SUPPLEMENTARY MATERIALS

**Supplementary Figure 1: Sensitivity of OS cells to low-dose chemotherapy increases when treated with metabolic modulators using EP first.** Sensitivity of (A) K7M2 and (B) Saos2 cell lines treated with metabolic modulators actively (with EP) or passively (without EP), combined with low-dose Cisplatin was evaluated by stained colonies formed in Cisplatin-treated media over a period of time. Picture of each well shown is a representative image of at least nine similar wells (three independent experiments).
