Appendix 1 – Workshop content with Reflections

Part 1

Introductions

As the focus of the workshop was on IPE and developing communication between the two student groups the workshop started with an icebreaker activity to encourage students to introduce and share information about themselves. This was immediately followed by an experiential swallowing activity with small group discussion.

The Normal Swallow

Theoretical information relating to the anatomy and physiology of normal swallowing including, Cranial Nerves and Phases of Swallow was presented through a PowerPoint presentation and illustrated with videoclips.

Part 2

Dysphagia

Theoretical information relating to dysphagia was presented through a PowerPoint presentation and illustrated with patient videos and clinical data. Students were encouraged to ask questions and to share their own experiences of working with dysphagia. Clinical signs/symptoms, consequences and underlying conditions related to dysphagia were discussed. To consolidate the information each group designed a referral card using information from a patient video. The aim was to identify the information required from the perspective of MED and SLT students to facilitate appropriate referral for a patient with dysphagia.

Part 3

Management

Management of dysphagia focused on modified consistencies and its role in dysphagia management, and the impact on medication administration. Students engaged in an experiential activity where they sampled modified consistently fluids and discussed their impressions of this within the main group both from a personal experience and within the context of quality of life for patients who are recommended a modified consistency diet.

Part 4

Interdisciplinary Role roles & Ethical Issues

Discussion on ethical issues related to patient quality of life, informed consent and end of life care was facilitated through an activity where students had to devise a management plan for simulated patients with complex medical needs, including terminal diagnosis, intellectual disability, and severe dysphagia. The aim of this

activity was to develop decision making within an interdisciplinary team where there was not a clear pathway of care within the context of a complicated patient case history and challenged the students to communicate and negotiate using their professional knowledge base. For this task students had to consider the roles of various interdisciplinary professionals in the care of these stimulated patients.

Facilitator Reflection

Part 3 activities facilitated movement within the large group and encouraged personal and qualitative feedback which resulted in a lively discussion and better communication within the smaller groups probably related to the fact that this activity was not related to prior knowledge and did not evaluate skills, so students were more confident in giving feedback.

The strength of the activity in **Part 4** was that it was patient focussed which resulted in more investment in the activity and because of the difficulty of the case there was not necessarily one correct outcome which facilitated discussion between the student groups from each of their clinical perspectives. It would be beneficial to introduce this type of activity earlier on in the workshop as the patient related problem solving in generated better communication within the small groups.

Appendix 2 Questionnaire (Q8 &14=pre-workshop only; Q16-18=post-workshop only)

1	Sex: Female () Male ()	11	How would you administer medication in a patient with dysphagia? (please select one)
2	Indicate by ticking the box if you are a		() Cut the medication and offer water
	a. Medical Student ()		() Crush/smash the medication and mix it with yoghurt
	b. Speech and Language Therapy Student ()		() Dissolve it with liquid
3	What is the correct sequence of the phases of swallowing?		() Seek Pharmacy referral () Other (describe)
	() Oral, oral preparatory, pharyngeal, esophageal		() I do not know
	() Oral, oral preparatory, esophageal, pharyngeal		
	() Oral preparatory, oral, pharyngeal, esophageal	12	What is the main role of the following Professionals in the
	() Oral preparatory, oral, esophageal, pharyngeal		management of dysphagia? (briefly list main role for each one. I
	() I do not know		you don't know write 'DK')
4	What is dysphagia? (please select one)		() Dietitian () Nurse
	() Difficulty in transporting food from the mouth to the stomach		() GP
	() Symptom of a disease of the digestive tract		() Occupational Therapist
	() Pain in the digestive tract		() Pharmacist
	() I do not know		() Physician
5	What are some of the complications of dysphagia? (please select		() Physiotherapist () Radiologist
,	one)		() Speech & Language Therapist
	() Malnutrition, dehydration, increased sensitivity of the larynx		() opecon a zangaage merapist
	() Dehydration, malnutrition, aspiration	13	Which ONE professional is mainly responsible for assessing and
	() Malnutrition, aspiration, increased sensitivity of the larynx		rehabilitating patients with dysphagia? (please select one)
	() I do not know		() Dietitian () Nurse
6	Which of the following symptoms could patients with dysphagia		() GP () Occupational Therapist () Pharmacist () Physician
5	present with? (please select all relevant symptoms)		() Pharmacist () Physician () Physiotherapist () Radiologist
	() Loss of saliva/food from mouth () Oral Thrush		() Speech & Language Therapist () I do not know
	() Difficulty chewing () Chronic cough		
	() Nasal reflux () Absent gag reflex	14	Have you encountered a patient presenting with dysphagia
	() Difficulty starting a swallow () Choking		during your clinical placement(s)?
	() Increased feeding time () Loss of appetite () Alteration in vocal quality e.g. wet voice		() Yes () No
	() Indigestion () Breathlessness on exertion e.g. walking		If yes, briefly describe how you managed this patient
	() Frequent chest infections		
7	Which of the following medical conditions can <u>cause</u> dysphagia?	15	How relevant do you believe dysphagia knowledge is relation to
	() Parkinson's Disease () Inflammatory bowel disease		your clinical practice? (indicate on the scale below where 10 is
	() Stroke () Head and Neck Cancer		fully relevant and 0 is not relevant at all.)
	() Sinusitis () Hypothyroidism () Diabetes () Cerebral Palsy		
	() Crohn's disease () Motor Neurone Disease		0 1 2 3 4 5 6 7 8 9 10
	() Dyslexia () Multiple Sclerosis		Please comment on the reason behind your score above
	() Traumatic Brain Injury () Dementia		
8	Have you received guidance/education that focusses on the	16	How beneficial did you find Inter-Professional learning about
	assessment and management of patients with dysphagia? [PRE-		dysphagia? (indicate on the scale below where 10 is fully beneficial and 0 is not beneficial at all.) [POST-WORKSHOP
