Supplementary Figure 1

Supplementary Figure 1: SH-SY5Y cells co-express the FLAG tag and GFP when co-transfected. Representative photomicrographs of SH-SY5Y cells transfected with 500 ng of plasmids expressing FLAG-tagged ZNHIT1 together with a plasmid expressing GFP-tagged wild-type α-synuclein (αSyn) and immunocytochemically stained for FLAG (red) to show co-localisation with GFP fluorescence (green) indicating their co-expression in transfected cells.
