Supplementary File - Figures S1-S5

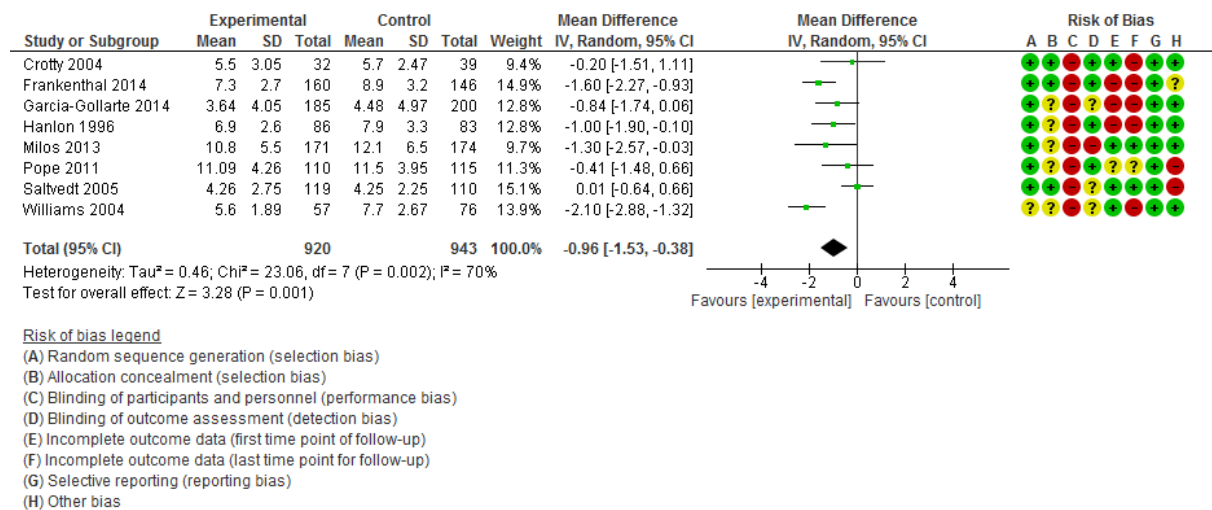

Figure S1 Mean number of drugs per patient post-intervention comparing experimental (intervention) group and control group.

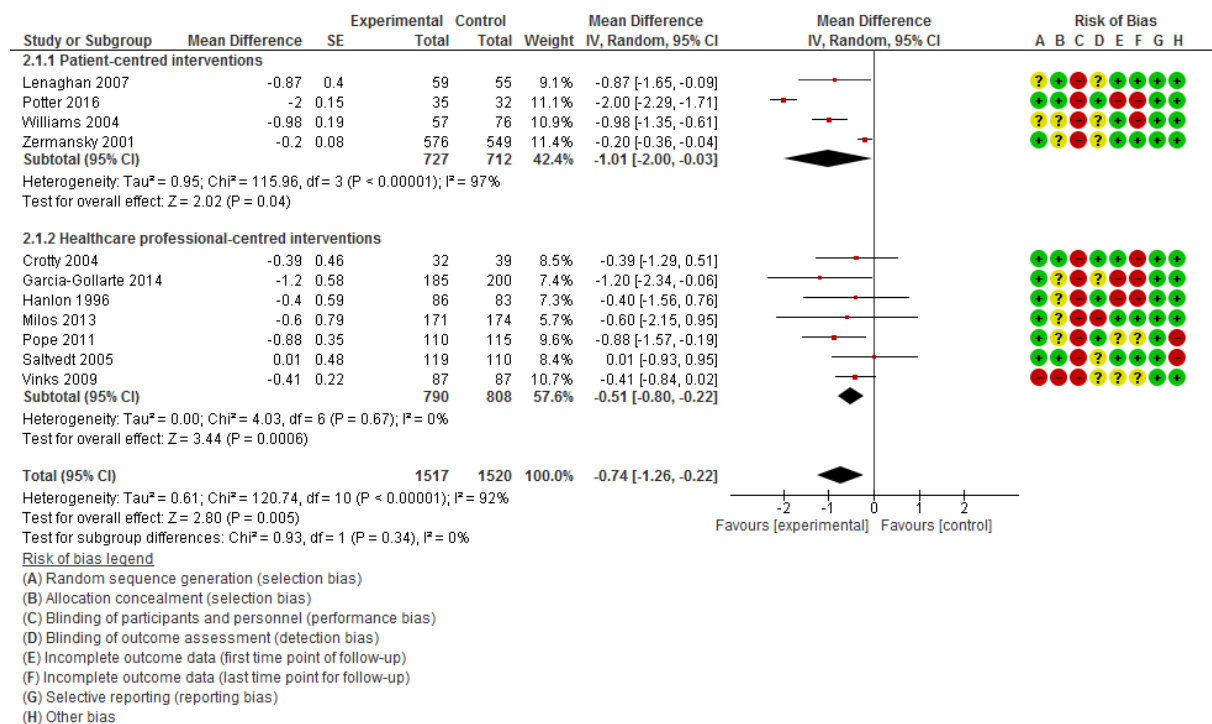

Figure S2 Subgroup analysis on target person (patient or healthcare professional) for mean difference in the change in number of drugs per patient.

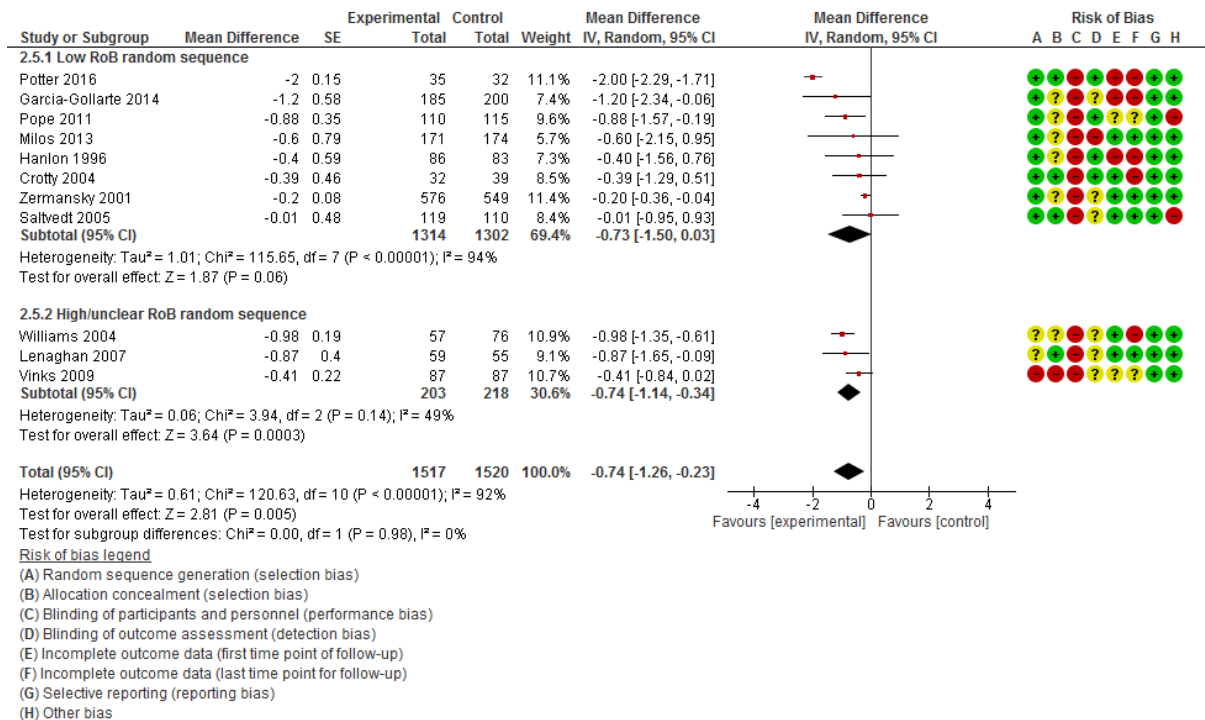

Figure S3 Subgroup analysis on risk of bias assessment (random sequence generation) for mean difference in the change in number of drugs per patient.

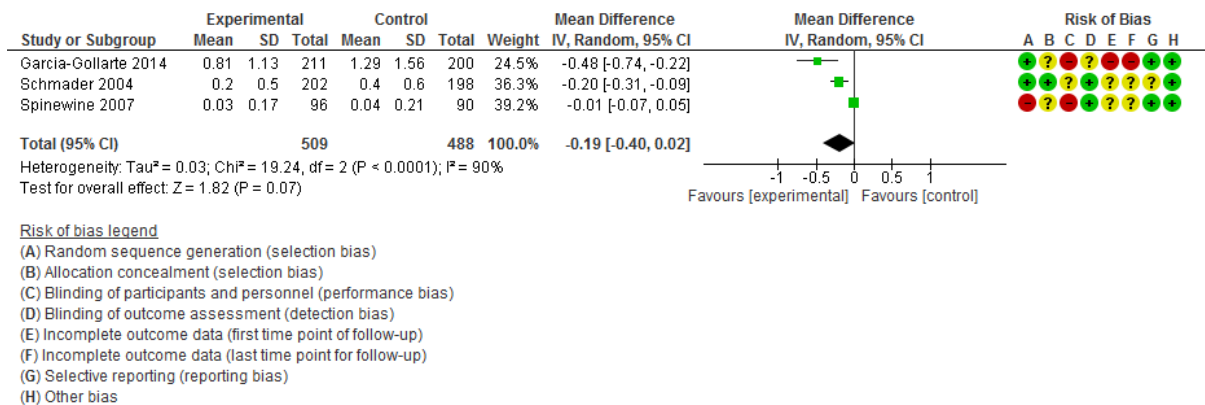

Figure S4 Mean difference in the number of inappropriate drugs per participant comparing experimental (intervention) group and control group.

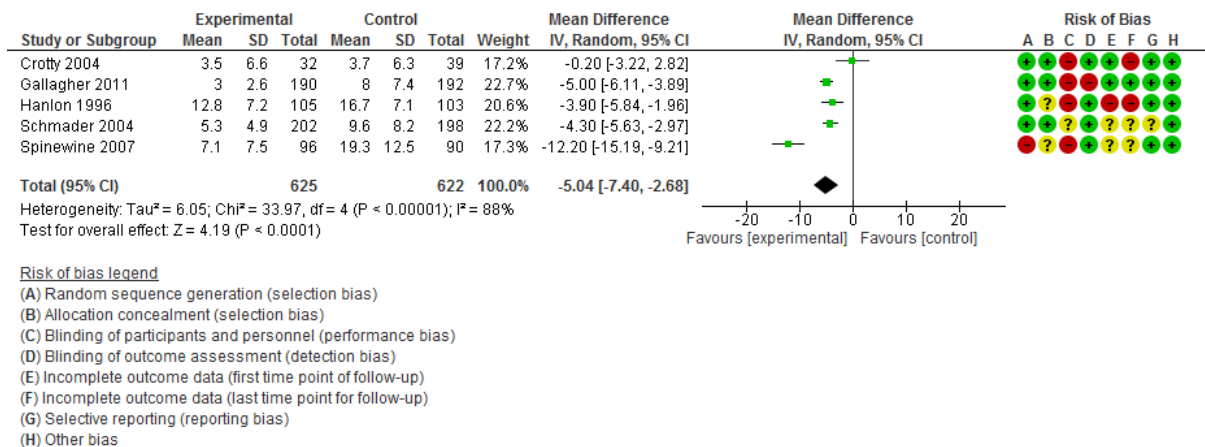

Figure S5 Mean difference in the change in MAI score per participant comparing experimental (intervention) group and control group.
